Ritsuharu AIZU	Kiyoshi SHIDA	Changes in social norms and innovation from an in-situated learning perspective - New values created by cooperative learning by customers and shops -	This study looked at two restaurants and analyzed their customers' deviant behaviors. The norm change process involves customers' deviation from the norm (errors, accidents, and misunderstandings) serving as a proposal to change the norms, with the stores generating new norms by adjusting the accidents, compulsions, and disagreements. If a new norm was not set, the norms were compulsorily maintained in order to adjust the discordance between the customers' usage method and the store's usage application. Consequently, norms were modified or maintained without the customers and stores intending to do so due to their dependence on the current status quo.
Mihoko HARADA	Kiyoshi SHIDA	Art as a response to an encounter : a new methodology for art and art education	Through the practical application of art as an activity, I have studied the position of appreciation in art education and new ways of art and art education. Art as an activity is a direct confrontation art that responds to encounters. The appreciation activity in the way of art of direct confrontation is not only to appreciate and respond.
